# Errata

In addition to the proposed changes listed in Section 6 of the Final EIR, Proposed Text Changes to the Draft EIR, the following revisions are provided for clarification purposes and do not change the analysis and conclusions in the Draft EIR.

Pages S-43 and S-44, specific rows of Table S-2:

**Table S-2**
**Summary of Impacts and Mitigation Measures**

| Impacts | Applicable Project Component | Impact Significance Without Mitigation | Mitigation/Improvement Measures | Impact Significance With Mitigation |
|---|---|---|---|---|
| | | | ~~*BR 1.3 Implement Procedures to Protect California Red-legged Frog and the Western Pond Turtle*. If development is proposed within 300 feet of Matadero or Deer Creeks, Stanford shall retain a qualified biologist to conduct a survey of the construction area for the presence or absence of California red-legged frog and Western Pond Turtle. If the species have determined absent from the area, then no further mitigation would be required. If the species are determined present in the area, Stanford shall comply with all applicable state and federal laws governing impacts on these sensitive species.~~<br>~~*BR 1.4 Implement Procedures to Protect Riparian Habitat*. The project shall be designed to avoid riparian habitat and the drainages that support this habitat, in accordance with the Palo Alto Comprehensive Plan, which prohibits the encroachment into areas within 100 feet of the top of a creek bank. Should development affect riparian vegetation that may extend beyond the 100-foot setback, Stanford shall retain a qualified habitat restoration specialist to develop and implement a Riparian Habitat Mitigation Plan. The goal of the plan is to offset the loss of existing riparian vegetation by establishing replacement riparian vegetation at a ratio to be determined in consultation with the CDFG. A typical mitigation ratio for loss of riparian habitat is 3:1 for each acre lost. This compensatory habitat is intended to replace wildlife habitat and hydrologic values either on site or~~ | |

| | | | ~~at an off-site location as approved by the agencies. The details of the Riparian Habitat Mitigation Plan shall be the result of negotiations with Stanford and the CDFG. Monitoring of the mitigation habitat shall be conducted by a qualified biologist twice a year for at least five years. A draft of the plan shall be submitted to the U.S. Army Corps of Engineers, CDFG, the Regional Water Quality Control Board, the Santa Clara Valley Water District (SCVWD), and the City for review and approval prior to implementation.~~ | |
