LUCILE PACKARD CHILDREN’S HOSPITAL EXPANSION

INCREASING OUR CAPACITY FOR CARING

Lucile Packard Children’s Hospital is expanding its walls in order to meet growing community needs for specialized pediatric and obstetric care. In addition, Packard Children’s has an acute shortage of patient beds and needs to expand in order to meet capacity needs and further its mission of providing family-centered care for its patients.

The 104-bed addition, designed by the award-winning firm Perkins+Will in association with Hammel, Green and Abrahamson, Inc. (HGA), will promote family-centered care and create a welcoming, safe environment for patients and their families alike. Construction for the expansion is scheduled to begin in 2011 during which time Lucile Packard Children’s Hospital will remain open and fully operational.

ABOUT THE RENEWAL PROJECT

The expansion of Lucile Packard Children’s Hospital is part of the Stanford University Medical Center Renewal Project, which includes the design of a new facility for Stanford Hospital & Clinics and the replacement of outdated School of Medicine facilities. The Medical Center must rebuild and modernize its facilities in order to continue serving the region’s current and future healthcare needs and accommodate new advances in technology and patient care.

JOURNEY THROUGH PACKARD CHILDREN’S EXPANSION

The expansion of Lucile Packard Children’s Hospital is designed to promote family-centered care and create welcoming and safe healing environments by balancing the hybrid needs of clinical research advancements with the specialized needs of pediatric and obstetric patients and their families.

DAYTIME EXTERIOR VIEW
The hospital expansion incorporates sustainable design elements, and all patient areas are accessible to natural light.

VIEW OF NEW AND CURRENT FACILITY
The new Packard Children’s facility is a true expansion of the current hospital and will balance clinical research advancements with the specialized needs of pediatric and obstetric patients and their families.

EMERALD GARDEN
Healing environments are being designed for the specialized needs of pediatric and obstetric patients and their families.

THE NEST
Single-patient rooms all have provisions for families to stay with the patient during treatment and recovery.
