Ray Morneau, an International Society of Arboriculture Certified Arborist, will prepare an Arborist Report for the trees located within the Area Plan. The report will consist of a numbered inventory of trees with a minimum of four-inches in thickness, and will identify heritage and protected trees, as well as addressing species, size, age, dripline area, health and location of each tree.

Three copies of a certified Arborist’s Report were submitted under separate cover during the first week in October.
