

### DID YOU KNOW?

Car exhaust can **aggravate** asthma and decrease lung function – especially in kids.

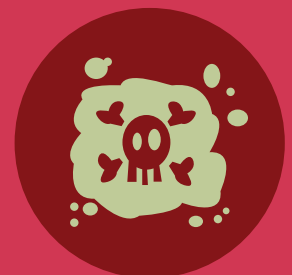

### DID YOU KNOW?

Extended idling produces greenhouse gas emissions that go into the air.

### DID YOU KNOW?

Idling engines diminish the quality of life in our community by causing air pollution, noise, and odor.

### DID YOU KNOW?

Turning off your engine after two minutes of idling actually saves gas and cuts down on emissions.

The City of Palo Alto has passed an anti-idling ordinance requiring drivers to shut off their engines after two or three minutes if they are not in active traffic. Enforcement of the ordinance is centered on community education and the health and environmental impacts caused by vehicle idling. Pollution from engine emissions can worsen pulmonary diseases, including asthma, lung cancer, bronchitis, acute respiratory infections, and emphysema.

The City of Palo Alto has passed an anti-idling ordinance requiring drivers to shut off their engines after two or three minutes if they are not in active traffic. Enforcement of the ordinance is centered on community education and the health and environmental impacts caused by vehicle idling. The City of Palo Alto has set a goal of cutting greenhouse gas emission by 80% by 2030 from a baseline set in 1990. We are more than halfway there, and reducing unnecessary idling will help to meet this emissions reduction goal.

The City of Palo Alto has passed an anti-idling ordinance requiring drivers to shut off their engines after two or three minutes if they are not in active traffic. Enforcement of the ordinance is centered on community education and the health and environmental impacts caused by vehicle idling. While technology has made newer internal combustion engines less polluting, older cars and extended idling still add to harmful particulates in the air.
