**Getting to 80 x 30: Your Transportation Vision
for Palo Alto**

New Electric Vehicle Point-of-Sale Rebate

All Palo Alto residents purchasing electric vehicles will be eligible for a point-of-sale \$1,500 rebate starting Tuesday, November 17 through the new Clean Fuel Reward Program. City of Palo Alto Utilities will be contributing funds towards this program. All auto dealerships in

Join us for the next topic of our 2020 Sustainability and Climate Action Plan (S/CAP) webinar series:

Getting to 80 X 30: Your Transportation Vision for Palo Alto

Wednesday, November 18, 7pm – 8pm

This webinar will discuss road transportation, which has the highest potential for greenhouse gas emissions reductions. We want to hear your ideas on how the City can help residents transition to a greener transportation future and help us meet our goal of reducing greenhouse gas emissions 80 percent below 1990 levels by 2030.

Upcoming Webinars

- Getting to 80 x 30: Your Transportation Vision for Palo Alto – November 18, 7 – 8 pm. Register [here](#).
- The Importance of the Natural Environment in Meeting Our Sustainability Goals – December 8, 6:30 – 7:30 pm. Register [here](#).

The City of Palo Alto launched an update to the [Sustainability and Climate Action Plan \(S/CAP\)](#) earlier this year to help meet our City's sustainability goals, including our goal of reducing greenhouse gas emissions 80 percent below 1990 levels by 2030. City staff proposed goals and key actions in seven areas: Energy, Mobility, Electric Vehicles, Water, Climate Adaptation and Sea Level Rise, Natural Environment, and Zero Waste. In September 2020, the City

Palo Alto will be notified of this opportunity. For more information, visit <https://cleanfuelreward.com/>

Take Action without Leaving your House

The modern electric home:
Cleaner, safer, better.

Ready to live in a home that's more comfortable and healthier for your family and the planet?

California buildings—and this includes homes—are responsible for more than a quarter of all statewide greenhouse gas emissions. Emissions from gas heating and gas cooking in a home are roughly equivalent to the emissions from driving a gasoline car. Simply put, we can't meet our climate goals without addressing emissions from our buildings.

By introducing clean electric appliances into our lives, we can avoid greenhouse gas emissions, and make our homes healthier. Better for you. Better for the planet.

Learn how to navigate the

of Palo Alto launched a webinar series to highlight various topics in the [2020 Sustainability and Climate Action Plan \(S/CAP\)](#).

transition to 100% clean appliances at <https://www.switchison.org/>

“The Switch is On” is a project of the Building Decarbonization Coalition in partnership with City of Palo Alto Utilities and other agencies.
