

**IF YOU PREFER A
WARM SHOWER
TO A FREEZING
COLD PLUNGE...**

**...IT MAY BE A GOOD IDEA TO THINK ABOUT
YOUR WATER HEATER NOW - BEFORE IT'S
TIME TO REPLACE IT.**

Do you know the age of your water heater? Most tank-style water heaters only last about **12 years**.

If you suspect your water heater is near the end of its useful life, you may want to consider upgrading to a **Heat Pump Water Heater (HPWH)**. The City of Palo Alto Utilities offers rebates of up to \$1,500 for HPWHs.

The **Home Efficiency Genie** can help you look up the age of your water heater from the unit's serial number and offer project advice. Contact us at (650) 713-3411 or visit efficiencygenie.com

Not only are HPWHs the most efficient water heating technology on the market, they're also cost effective.
